

(device,0,0,-1,-1,1,3) Plots and Summary

- Cell Size = 10um
- Number of Times Accessed = 1
- Last Stimulated = 2022/March/02 at 04:13PM

Stimulated at 04:13PM on 2022/March/02

Activity = set

Start Voltage = 0V

End Voltage = 5V

Ramp Rate = 1V/s

Compliance Current = 20.0uA

Platinum Voltage =

Copper Voltage =

Run Folder Name = <2 probe, so invalid>

Comments = B: Platinum, A: Copper. B probe is set to ground, so no column for B. B is the third white probe at the back. Just like in CSV 202203021608, this is showing set behavior as well despite no stimulation or forming history, which is strange. This implies B probe issue. Maybe this might be related to us using the platinum row 0 multiple times already for various cells? -- Test this hypothesis by avoiding platinum row 0 in the future.

Probe A plots
